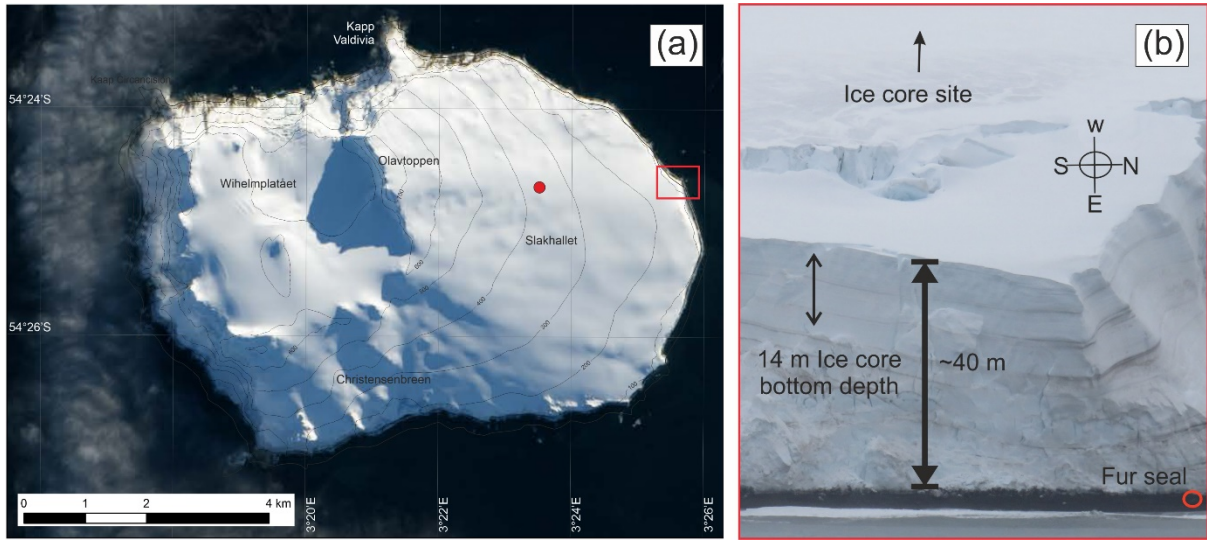

Figure S1: Visible layers on Bouvet Island. (a) Map of Bouvet island, showing the ice core drilling location (red dot) and the area the photo was taken (red box). Image credit Google Earth. (b) Photograph of an ice cliff taken from the ship, revealing the visible “dirty” layers that are assumed to represent dust or ash deposits (image credit E.R. Thomas). The depth estimates relative to the fir seals on the beach (red circle).
