Figure S1: Comparison in distribution of snow depth in spring (March-April) 2015 (units: m) over different regions. Solid lines are from MERRA2-based SnowModel-LG while dashed lines are from corresponding product. The analysis is made based on the common spatial coverage of the different products and SnowModel-LG.

Figure S2: Snow distribution comparison between W99 and snow products in autumn
(October/November).

Figure S3: Same with Figure 7 but for common coverage up to $87.5^{\circ} \mathrm{N}$ (without DuST)

Figure S 4 : Same as Figure 12, but comparisons with four OIB products using the native spatiotemporal resolution of the snow products

Figure S5: Comparison of total winter snow accumulation (starts from early winter to the next year) between buoys and three snow products based on daily snow products.
