The figure shows a time series of temperature measurements over a period from 2010 to 2021. The temperature readings are labeled with different symbols and colors:

- **T** [°C] represents the temperature inside the cave.
- **Tout** represents the outdoor temperature.
- **door closed** indicates periods where the door was closed.
- **θout < θcave** denotes outdoor temperature below the cave temperature.
- **σcave > 0.1°C** indicates cave temperature above 0.1°C.

The graph includes lines and markers to indicate trends and specific events, such as changes in temperature and door closure status.
