S1 SMOD trends in respect to aspect and DAH

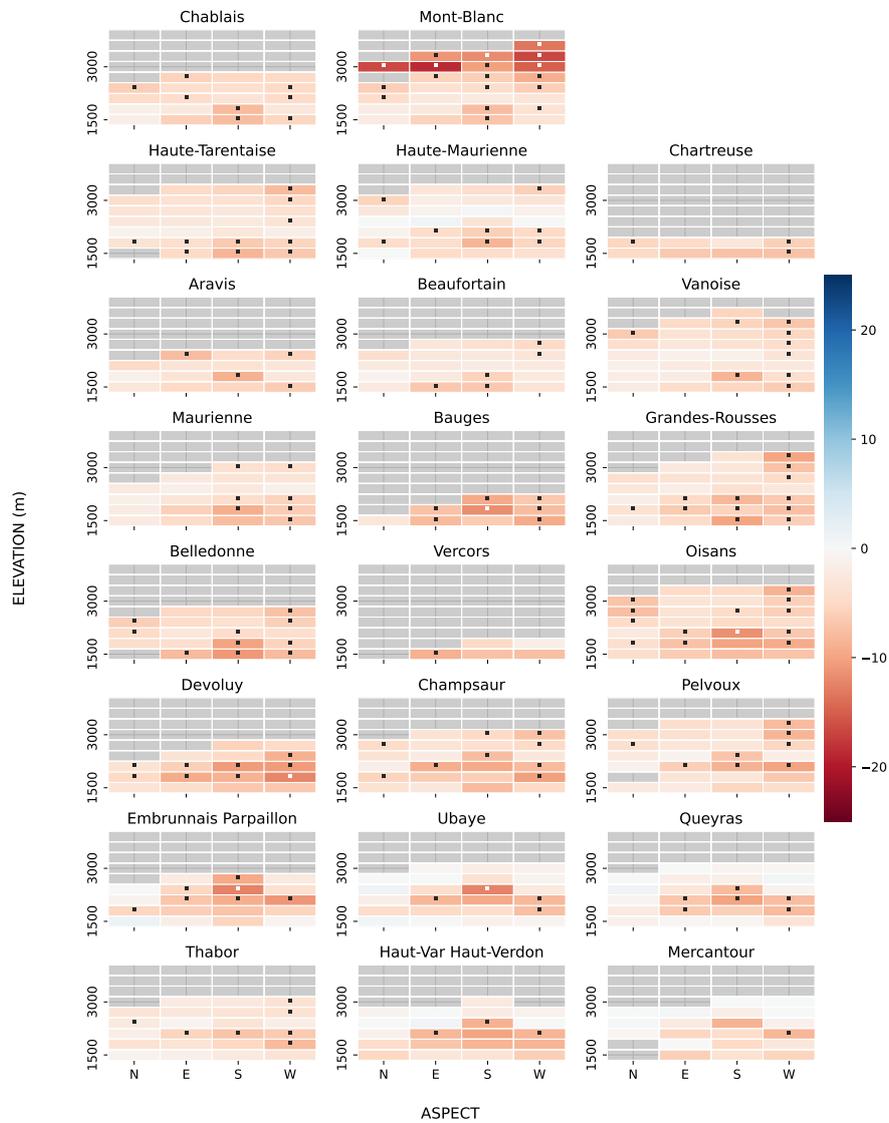

Figure S1. French Alps. Heatmaps of the MK test over the trend of the SMOD median of each elevation band (± 150) and aspect filtered for $\text{NOBS}_{\min} \geq 10$. Colors indicate the SMOD trend as days per decade, and dots indicate statistically significant trends ($p\text{-value} < 0.05$).

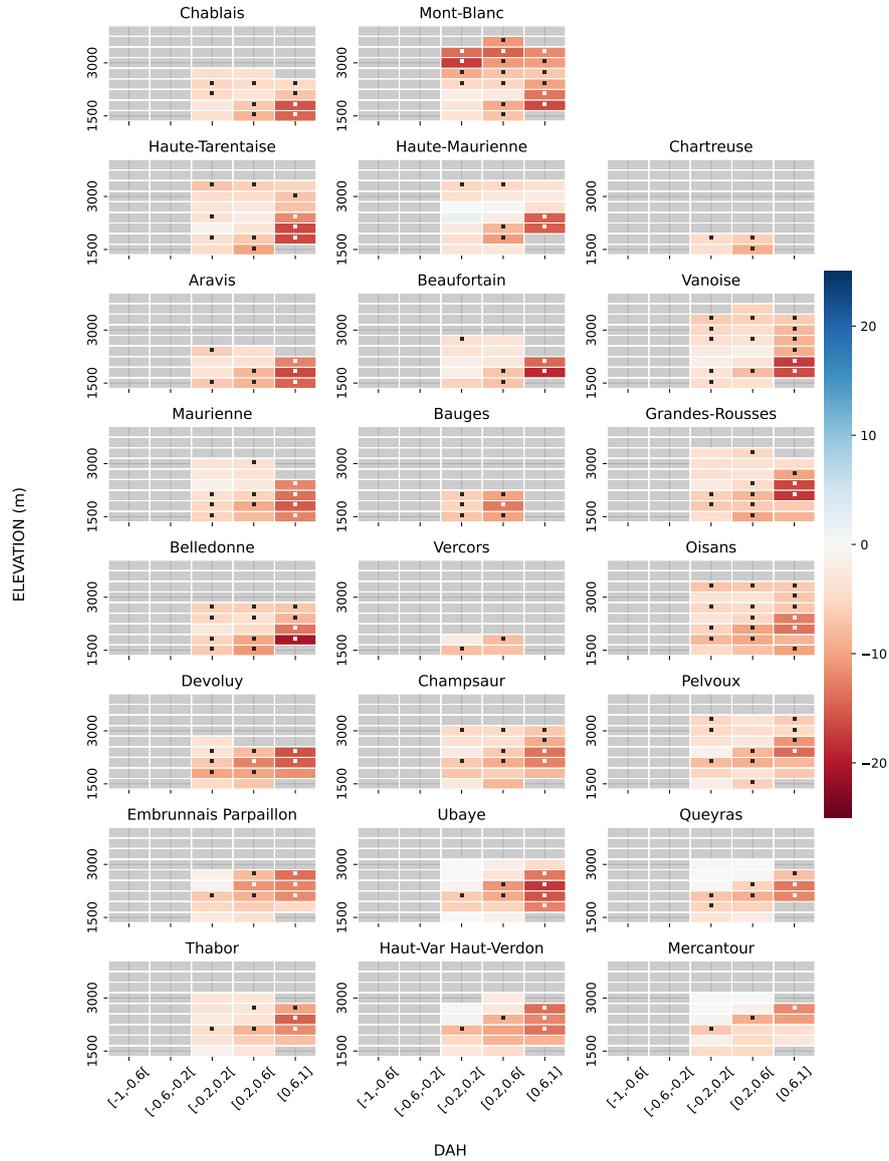

Figure S2. French Alps. Heatmaps of the MK test over the trend of the SMOD median of each elevation band (± 150) and DAH filtered for $\text{NOBS}_{\min} \geq 10$. Colors indicate the SMOD trend as days per decade, and dots indicate statistically significant trends ($p\text{-value} < 0.05$).

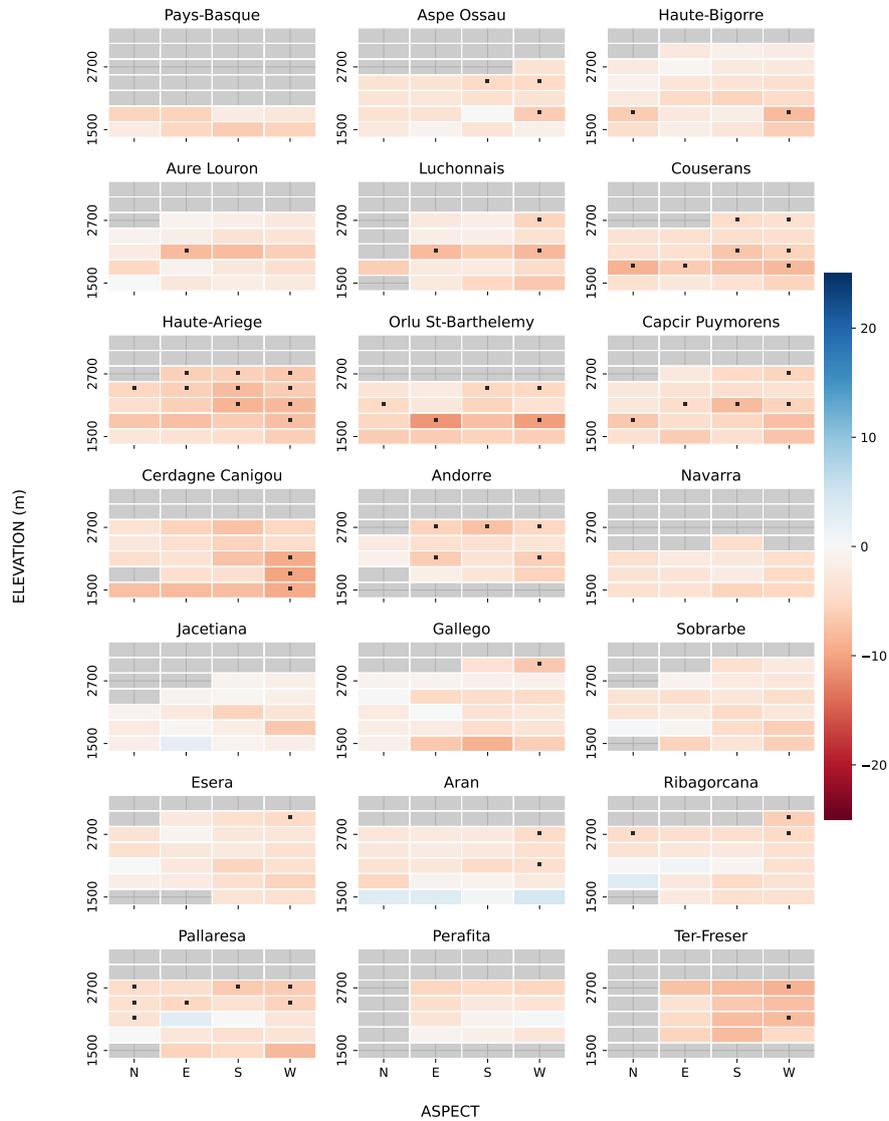

Figure S3. Pyrenees. Heatmaps of the MK test over the trend of the SMOD median of each elevation band (± 150) and aspect filtered for $\text{NOBS}_{\min} \geq 10$. Colors indicate the SMOD trend as days par decade, and dots indicate statistically significant trends ($p\text{-value} < 0.05$).

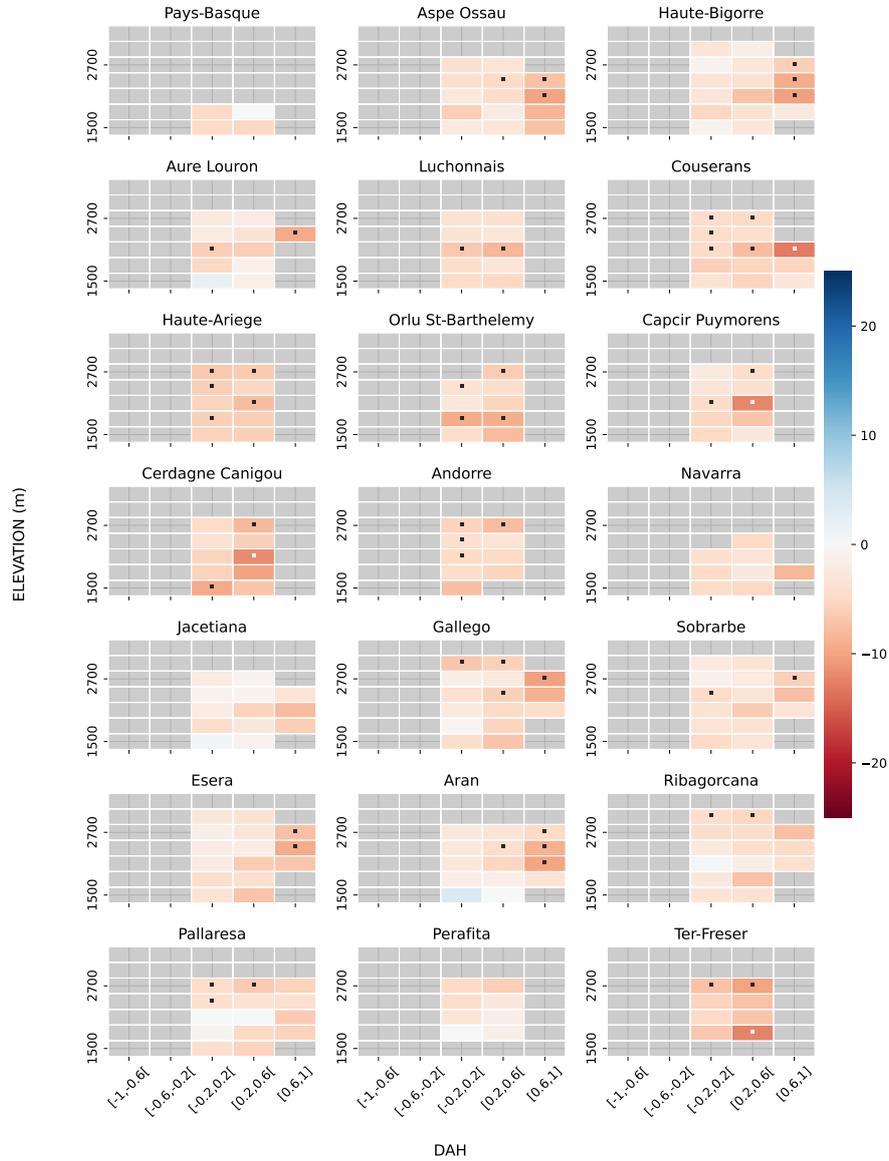

Figure S4. Pyrenees. Heatmaps of the MK test over the trend of the SMOD median of each elevation band (± 150) and DAH filtered for $\text{NOBS}_{\min} \geq 10$. Colors indicate the SMOD trend as days per decade, and dots indicate statistically significant trends ($p\text{-value} < 0.05$).
