

## ***Interactive comment on* “The equilibrium flow and mass balance of the Taku Glacier, Alaska 1950–2006” by M. S. Pelto et al.**

**M. S. Pelto et al.**

Received and published: 21 July 2008

The second referee has pointed out a number of useful suggestions that when addressed will improve the paper. The caveats on the accuracy of the mass balance data are acknowledged as they have been in publications to date. This is one reason that this data has not been submitted to the World Glacier Monitoring Service. The revised draft will better utilize independent corroborating data, which provides a good validation for the accumulation zone.
