

***Interactive comment on “High resolution  
modelling of snow transport in complex terrain  
using simulated wind fields” by M. Bernhardt et al.***

**M. Bernhardt et al.**

Received and published: 25 November 2009

First of all I want to thank Richard Essery for his meaningful comments. All off the improvement suggestions were considered. The formula section was shortened and the original papers were cited instead. Furthermore, some details of the downscaling routine were clarified with respect to the suggestions. Kind regards, Matthias Bernhardt
