

***Interactive comment on “High resolution
modelling of snow transport in complex terrain
using simulated wind fields” by M. Bernhardt et al.***

M. Bernhardt et al.

Received and published: 25 November 2009

Stephen Déry has made an excellent Review with numerous suggestions. We have tried to clarify all of the points listed in his review letter. We have also inserted the needed citations to clarify all open questions with respect to SnowModel and SnowTran-3D. We have done this instead of including more formulas because the description of the different models is excellent within the cited papers and because of the suggestions made by Richard Essery. Thank you again for your work. Kind regards,
Matthias Bernhardt
