This is a very good paper that deserves publication in TC. There are only a few revisions suggested:

When talking about the Mass Balance measurements (p. 419, line 22) it would be helpful to name the institutes doing the mass balance measurements and the link, where the data can be found i.e. Commission for Glaciology, Bavarian Academy of Sciences, www.glaciology.de for Vernagtferner

C109

All in all an excellent paper!
