Received and published: 30 March 2009

Dear authors

Please excuse the unusual delay in the processing and evaluation of this manuscript that now has received three detailed and very constructive reviews. All reviewers agree that your method is important and worth publishing and, at the same time, raise a number of points for improvement of the argumentation or its context in existing publications. Please address the points raised by all three reviewers in your response and indicate how you have incorporated them into the new manuscript. Your resubmission will then likely not requires a second round of external review. Two reviewers have sug-

gested a changed title. I agree that 'rapid and accurate' are relative terms and should be avoided, here. As to the other suggestion, I leave it up to you to consider adopting the proposed title. This is an exiting new method and a great contribution. I look forward to seeing this manuscript published in its final version.

Kind regards, Stephan Gruber
