Xavier and co authors,

It looks like you can address the referees' comments without too much difficulty. I agree with your comment about the PMR data being used in ERA-40 and do not consider this to be a substantive issue for the analysis that you are performing here. A couple of sentences on this will suffice. However, referee 2 does make some points about the paper structure and readability which are similar to mine and I would like to see these fully addressed in a revised m/s.
