

Interactive comment on “An algorithm to detect sea ice leads using AMSR-E passive microwave imagery” by J. Röhrs and L. Kaleschke

Anonymous Referee #2

Received and published: 12 May 2010

This is an interesting MS that present significant analysis and advances in the mapping of leads in sea-ice by passive microwave satellite imagery. The paper is generally well presented and should be of wide interest to scientists analysing sea-ice changes as well as, from a technical viewpoint, remote-sensing specialists.
