About names: names like Vukušić Vukošić Ice cave and Ledena Pit: I think that it would be better to remain with original names Vukošić snježnica, Ledena jama. Page 1564/10: I am more inclined to the idea of dynamic cave since there are entrances in different levels enabling good enough and also necessary cooling for the ice forming.

Page 1563/5: Check please reference Mihevc, 2009. It is wrong either the author or the title. Page 1568/20: the description of position of the cave against the Zavožan station is ambiguous
