Received and published: 31 October 2011

The authors would like to acknowledge the contributions of two additional individuals to this project, W. Berry Lyons and Michel Baraer, by including them as co-authors. W. Berry Lyons, a professor at Ohio State University, served as a co-advisor on my thesis committee and supervised/guided in both the lab analyses and writing. Michel Baraer, a Ph.D. candidate at McGill University, gave me substantive assistance with chemical sampling and quantitative analyses. These individuals contributed constructively as co-authors, and I feel that it is unjust to exclude them as such, even this late in the process. The fact that they were not included as co-authors was an oversight by myself and the other authors. We plan to add these individuals as co-authors for the revised version of the paper which will be submitted for publication in TC.
