Received and published: 16 September 2011

Based on E. Hunke’s response to my review, viz. to reframe the paper to better reflect its intent (provide new avenues for sea ice modelers to pursue) and the willingness of the authors’ to undertake the extensive revisions necessary to upgrade the paper, I would withdraw my recommendation for rejection and would look forward to their revised paper submission. A suitably revised paper would have substantial potential to contribute to sea ice modeling efforts and be of aid to those modelers.
