Dear Authors, After reviewing the referee comments and your rebuttals I must discourage submission of a revised manuscript for further consideration for TC. The reviewers, both recommending rejection, concur that there are fundamental issues with the validity of this model for simulating mélange that have not been satisfactory addressed in the responses. The proposed revisions will simply narrow the scope of the results to the point where they are not clearly useful. It is therefore unlikely that I will be able further consider a revised paper.

I'm sorry I can't be more positive. IMH
