The authors should consider the two reviewers comments seriously and reply all comments one by one in details.

Also, I found that the Fig 4 is too crowded. This is the key Figure, the authors may consider separate it into three figures or one figure with three pages. Each page contains two rows of images. This may affect page charges but for *.pdf file, it will look much better.

I strongly suggest that the authors reply quickly and the materials in the paper are excellent for the IPCC AR5.
