Suggest that the authors make a detailed reply, line by line, related with the two reviewers' comments. The reviewer's comments on scale issue (10m, 30m, 2 km, etc.) are excellent one. The authors need to pay attention on the issue. It may take more time, suggest the authors at least prove their cases that fine scale indeed can make a difference. The authors at least need a case study on the problem. If done, this will have a good contribution on modeling at different scales.

I also agree with other comments and suggest the authors consider them carefully.
