Overall, a very interesting paper which addresses an important problem. Although wide applicability may not be attained yet, this paper does provide an important step.

One important - but minor - correction is the terminology used to refer to "Landsat." With the recent launch of Landsat 8, it is important to make clear that the paper is emulating Landsat 7 (ETM+).

In addition, for the figures which reference wavelengths, I think it would make it more

C1961

easily readable if band numbers were included for all sensors.
