Sorry for the second comment, but this one is small.

I noticed that although the equations used "ln" to calculate X, the figures (e.g. Figure 5a) plots against log (assumed to be base 10). My guess is that the figure was produced in Matlab, were "log" actually is the command for "ln" (as opposed to log10) - but it would be good to clarify this ambiguity for future studies to be clear on what was actually done/reported.
