Congratulations to this global data set, which for sure needed major effort to compile. On a regional basis, we tried to track back the data to the measurements stored on our archive for the Austrian glacier, but unfortunately we were not able to track back some of the data listed in your supplementary material. E.g. the source of the first data points of Hintereisferner have not been clear to us, as well as newer data (e.g. Alpeiner Ferner after 2000) which does not actually match to our published data. We now try our best to make the original data with literature available via www.pangaea.de (with annual data upload) as complementary information to the excellent data base of WGMS. So please feel free to use this data for updating the world-wide length fluctuations.
