

Revised submission of Sakai et al. 2015 “Climate regime of Asian glaciers revealed by GAMDAM Glacier Inventory.”

March 2015

The authors have provided a careful and detailed response to my comments and made a number of important revisions to the manuscript. In particular, the authors have added sensitivity analyses of the meteorological input data and the solid-liquid precipitation threshold, compared the NCEP/NCAR and ERA-Interim reanalysis datasets, and provided greater discussion of uncertainties in their analysis. I have no further comments and recommend that the paper be published in *The Cryosphere*.
