

Supplementary material to

## ‘Revealing glacier flow and surge dynamics from animated satellite image sequences: examples from the Karakoram’

*F. Paul*

The supplementary material contains time-series of satellite images from four different regions in the Central Karakoram. The animations should play automatically when the respective file is opened in a web-browser. The individual images are false-colour composites showing glaciers in green-blue. All satellite images were provided by USGS and downloaded from the website [earthexplorer.usgs.gov](http://earthexplorer.usgs.gov).
