Supplement of

Small-scale disturbances in the stratigraphy of the NEEM ice core: observations and numerical model simulations

D. Jansen et al.

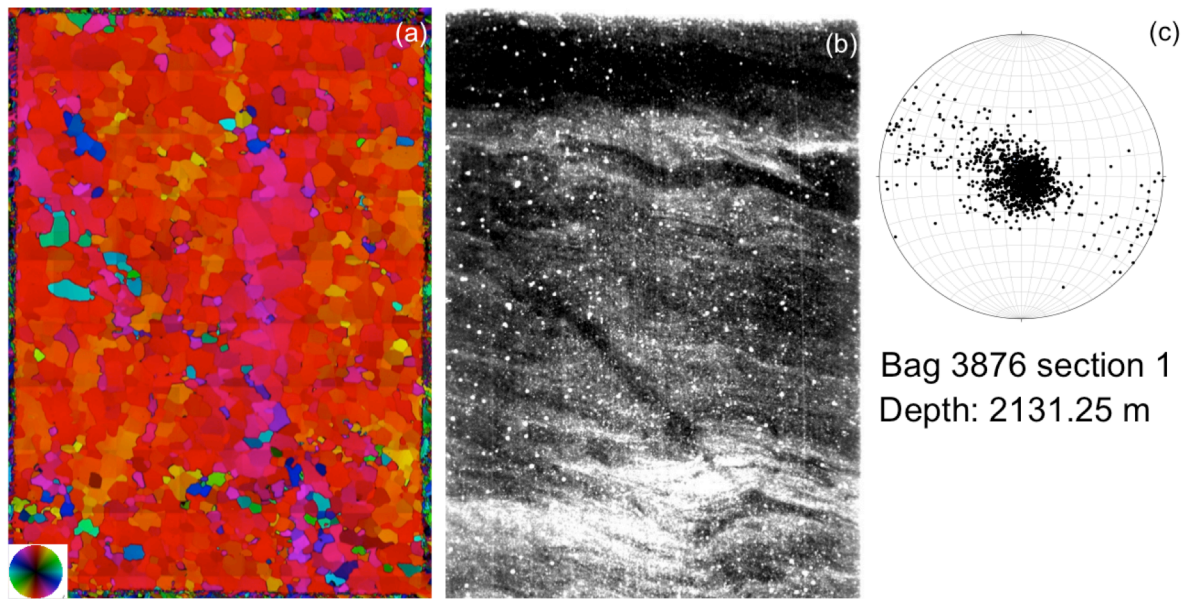

Figure S1: Comparison fabric data and visual stratigraphy in detail, Bag 3876, approximate depth 2131.25 m. (a) fabric data, (b) linescan image, (c) stereoplot of c-axis orientations.

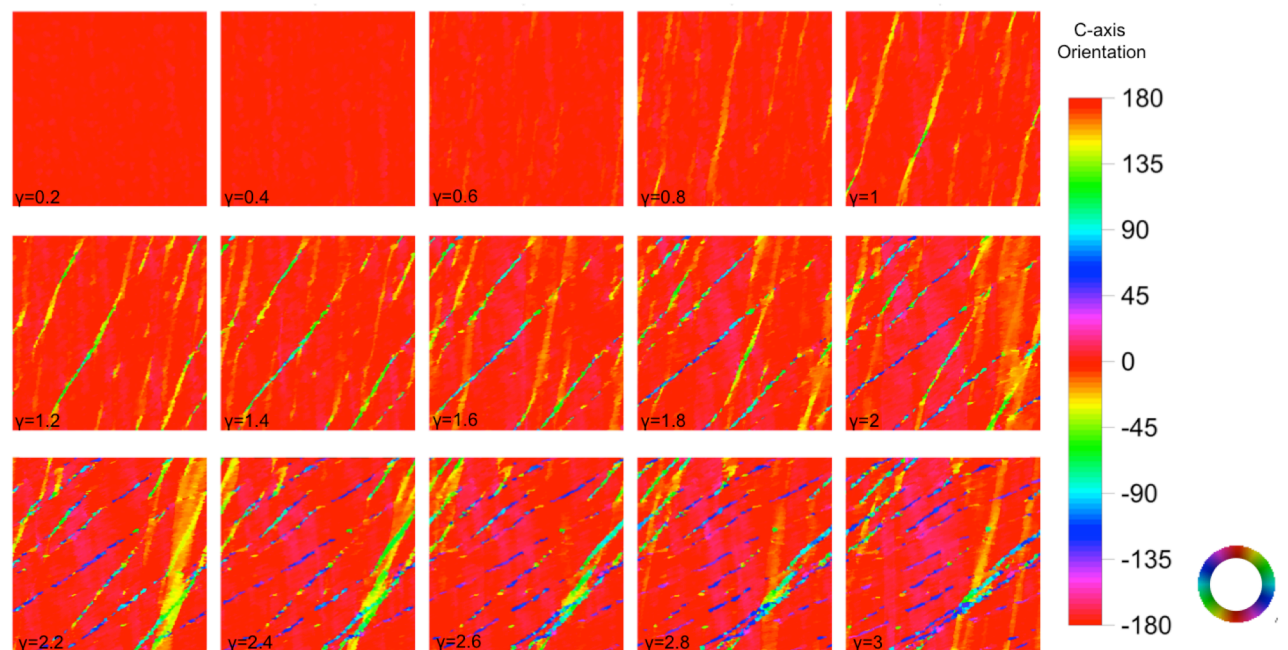

Figure S2: ELLE model results for the simple shear experiment for steps of $\gamma=0.2$.

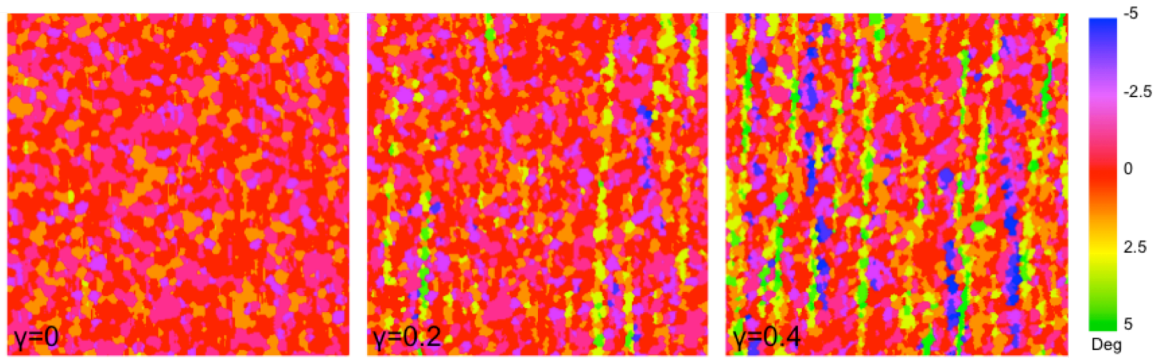

Figure S3: (a) Initial configuration of c-axes orientation for ELLE simulation. The color indicates the deviation from the vertical. (b, c) C-axes orientations after $\gamma=0.2$ and $\gamma=0.4$

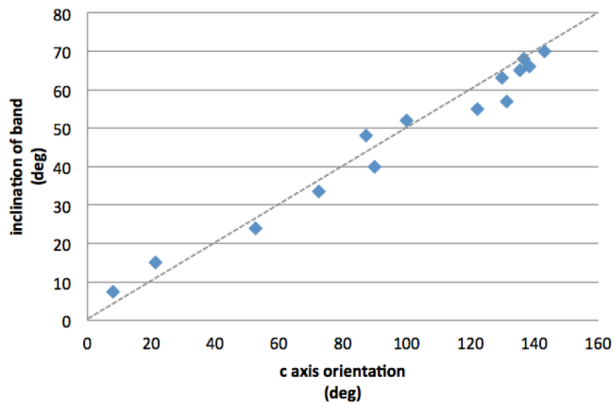

Figure S4: Relation between inclination of the bands and c-axes orientation derived from ELLE simulations. The dashed grey line indicates a slope of 0.5.
