I wrote "DI sees the grounding line at about 9 km on advance and advances to 12 km for 80 elements. At the same time (e.g) LF advances as far as 19 km but only advances to about +14 km for 80 lateral elements."

which makes not much sense... I meant

DI sees the grounding line at about 9 km after 100 years with 20 lateral elements and at 12 km for 80 elements. At the same time (e.g) LF advances as far as 19 km with 20 elements but only advances to about 14 km for 80 lateral elements
