Dear Editor, Dear Martin,

As mentioned in a recent email to you, I have considered your new proposition for the title of our paper.

I will indeed change the title so that it is no more an interrogation.

Following your advice, I have contacted my co-authors to seek for their opinion on the formulation of the new title. This is not the best time to do this, but I had about ten responses that all converge that they would like to keep it "milder" than your suggestion for the reasons we already discussed in our email exchanges. I would therefore like to ask you to be able to keep the final title as follows:

C1238

"Retrieval of a paleoclimatic signal from the deeper part of the EPICA Dome C ice core"

I'll be waiting for your final decision to upload the final files again. However, I am leaving tonight for abroad, and will only return on the 10th August, with very limited networking possibilities in the meantime.

There will therefore be a slight delay in the conclusion of these matters,

Thank you again for your kind and sustained involvement,

Best regards,

Jean-Louis Tison
