Dear Daniela and Co,

I have now read your rebuttal letter and the new version of the manuscript.

I believe you have done a great deal of work to answer the referee's comments. I however would like to have a final feedback from one of the reviewer, which shouldn't take too long, I believe. So, i'll wait for that to give my final "green light", if you don't mind.

In the meantime, two small comments on your responses and revised version of the

C2867

manuscript:

a) On line 110 of the new manuscript, I believe you mean "ice sheet" and not "ice shelf"  
:0) ...not easy to get rid of old habits, hé!...

b) in your response to reviewer 2, concerning annual layer thickness (section 3.1), you indeed added a sentence mentioning the annual layer thickness from Rasmussen et al. (2013), but the sentence "as is", is a bit disconnected from the surroundings...you actually do not make the link to some mean thickness layer value in your obs...which was the question of the reviewer, I believe...

Can you see to improve this?...

Thanks,

Jean-Louis.
