Dear editor, dear reviewers,

we would like to thank you very much for your constructive and critical reviews which helped us very much to improve the manuscript. We hope that we have adequately addressed and answered all reviewer comments (see attachment). We prepared also a revised manuscript, where we changed the text according to reviewers suggestions, shortened the abstract and the field site description part, added some paragraphs regarding several calibration issues (as raised by reviewer 1), and added two figures which better illustrate the advantages/disadvantages of our calibration approach and

C3402

its uncertainties.

With our very best wishes,

Antoine Marmy and co-authors
