Dear Editor, dear Reviewers,

We would like to thank you very much for the constructive reviews which helped us to improve the manuscript. We have addressed the comments in detail (see supplement) and hope that we responded to them adequately. Main revisions of the manuscript include the improvement of the presented visual information as suggested by both reviewers. We think that our geomorphological maps and topography illustrations can help the readers to follow the discussion. We also added a paragraph which addresses the difference between 2D and 3D inversion and displayed comparative results in a new figure.

With our best wishes,

Adrian Emmert and Christof Kneisel
