

Interactive comment on “Subgrid snow depth coefficient of variation within complex mountainous terrain” by Graham A. Sexstone et al.

R. D. Brown (Editor)

brown.ross@ouranos.ca

Received and published: 23 November 2016

Dear authors, thank you for submitting your paper to The Cryosphere. After reading the review comments and considering the recommendations of the reviewers, I regret to inform you that I cannot recommend your paper for publication in The Cryosphere. The main issues are the lack of significant new findings, and the inability of the paper to develop a physically-based approach for estimating CV. I trust the comments are helpful in rethinking the methodology as the reviewers saw merit in the paper's overall goal of applying Lidar to understand snow depth variability over complex terrain.

Best regards, Ross Brown (ed.)
