Hi, My name is Charlie Rodriguez and I am a GIS/Analyst. I was wondering if you were going to create a time domain analysis of the Ice sheets? I used data from the 1969 Nimbus imagery for my senior project to show the waxing and waning of the ice for a nine month period. Will you be conducting any type of mapping to show deteriorating of the arctic sea ice thickness? I am keen on being able to see this type of data being presented to the public as I have to face "Global warming deniers" every day and your data could help me with my arguments. Thanks so much. Charlie
