Received and published: 18 October 2017

Dear reviewer, Thank you for the thorough and supportive comments. The suggestion to contextualize the study in terms of the seasonal cycle and to quantify the effect of sub-surface porosity on ice mass were particularly fruitful. I provide a line by line reply to each comment in the attached response document, and include revised figures at the end of the document. A revised manuscript will be uploaded following receipt of instructions from the handling editor. Thank you kindly, Matthew Cooper
