Received and published: 29 August 2017

Dear Yuribia,

You will, by now, have received formal notification that the open discussion of your manuscript has closed. I would like to thank the two reviewers for their constructive comments on your manuscript. Both are encouraging and would like to see the research published, but both identify a number of issues that I would also like to see addressed, and which would likely constitute moderate/major revisions. In particular, this would include a much clearer and explicit presentation of the mapped data, a clearer and more objective separation of the results from the interpretations, and a

more in-depth and critical analysis in the discussion. There be a few instances where you feel there is a good reason not to undertake the suggested revisions, but this would require a detailed rebuttal/justification.

If you have any queries, please do not hesitate to get in touch.

Kind regards,

Chris Stokes Editor
