We thank reviewer 1 for the very positive and encouraging comments. We followed most of the recommendations.

Abstract: We reworded and restructured the abstract to make the main results clearer.

Page 1, line 23: we added 'basal conditions' to this sentence.

Page 5, line 14: we actually only applied a running mean to the resulting profiles extracted from the 10m product. Although the reviewer makes a valuable point for future analysis, the quality of the flexure profiles cannot much improve in view of our analysis. We therefore left this sentence as is.

Page 5, line 29: following this suggestion we add a half sentence, which reads now as 'In contrast to the vertical motion, which decreases towards the grounding line, the horizontal...';
