Dear authors,

many thanks for submitting three replies to the reviews of your paper.

Please also re submit three detailed responses to the reviews again with your revised version of your paper (paper in “tracked changes” mode). Your responses to the reviewers should be detailed and follow the TC guidelines: The author comments should be structured in a clear and easy-to-follow sequence: (1) comments from referees/public, (2) author’s response, and (3) author’s changes in manuscript (see also:

Discussion paper

https://www.the-cryosphere.net/peer_review/interactive_review_process.html). In your current replies, it is not clear what changes in the paper were done in the response to the reviewers' comments.

Since all reviewers have major concerns with your paper, your revised paper will be potentially reviewed again. This outcome will determine a potential publication in TC.

Thanks very much, Julia
