

I am satisfied with the author's responses to my questions/issues raised in my initial review. The revised manuscript is easier to follow based on feedback from the reviewers. I recommend that the revised paper be accepted with very minor revisions. My comments below are related to the figures presented in the paper.

Figure 15: At my suggestion, the authors added an enlargement to show detail. However, this enlargement isn't much bigger than what is shown in Figure 14. If the journal allows it, please enlarge further so it is readable.

Figure 17: Same comment as for Figure 15.

Figure 18: Can the dark blue background be lightened to be consistent with Figure 3?
