

According to my previous recommendation, the paper has been reorganized, clarified and valuable results are now presented in a proper way. In general, the authors have responded to my questions quite well. I think the paper warrants publication now. I only have some minor and final suggestions.

1. p. 1, line 7 (and elsewhere): The period of observation for PE station is indicated as 2010-2017. This should rather be 2010-2016?
2. p. 2, line 9: remove "and surface melt".
3. p. 16, line 15 and 18: specify to which humidity (specific or relative) you refer to.
