Dear Authors,

Both reviews are favorable and I clearly encourage you to submit a revised version that addresses the reviewers' comments. As mentioned in my access review, I also suggest checking whether ground-based precipitation or accumulation data are available at DDU and PE, and whether those data can be used as an extra check of CloudSat data. I am fully aware of the limitations of both precipitation gauges and accumulation data, but field scientists will doubtless be interested in the inclusion of such data, if available, in your paper.

C1

Best regards

Florent Domine
