Dear Authors,

The topic of your paper is very interesting, but both reviewers have significant reservations regarding the strength of your approach. In particular, it is essential to demonstrate the reality of the alleged bias using field or remote sensing data. It is critical that you convincingly address this comment before your paper can be considered for publication in The Cryosphere. I do encourage you to submit a revised version, but it will probably be sent again for review.

Thank you for submitting your work to The Cryosphere.

Best regards

C1
