Received and published: 9 April 2019

Dear authors,

Thanks for your initial and general reply to the reviews.

Their comments were partly echoing my access review where I already suggested (i) a reduction in the length of the text and in the number of figures in order to increase the impact of your study and (ii) the need to avoid new figures/results in the discussion. So there is a consensus with the reviewers on these aspects.

I generally agree with your initial responses and look forward to read a revised, short-

C1

ened article. You made the decision to keep it as a single paper. This is a choice I respect but make sure you convey a clear message to the readers.

As you know, I can only take my decision after reading the revised manuscript and, very likely, consulting the referees. At this stage, I encourage you to take carefully into account their constructive comments.

Looking forward to read your revised manuscript,

Etienne Berthier
