

The authors would like to thank both reviewers for their responses. We have edited Figure 1 so that instead of highlighting the lakes (we feel they should be clear to the reader anyway) we have outlined the location of the data used to produce Figure 4. Although these figures are from separate dates (Fig 1 was chosen as it is mostly cloud free and shows the lakes clearly in the context of the overall ice shelf more than images from the time period of Figure 4) the location of Figure 4 relative to the ice shelf should now be clear.
