Interactive comment on "Modelling the fate of surface melt on the Larsen C Ice Shelf" *by* Sammie Buzzard et al.

Anonymous Referee #1

My first pass through the paper determined that there were a number of style issues in the writing that should first be fixed before reading a second time for content.

I do sense the content is of great interest and quality, but it does no good to publish the paper as it is. There has to be a revision that addresses the clarity of presentation.

My suggested edits and questions are provided as notations in a PDF file of the paper that I've uploaded here. (My anonymity will be betrayed, but pretend you can't tell my identity in the pdf comments.)
