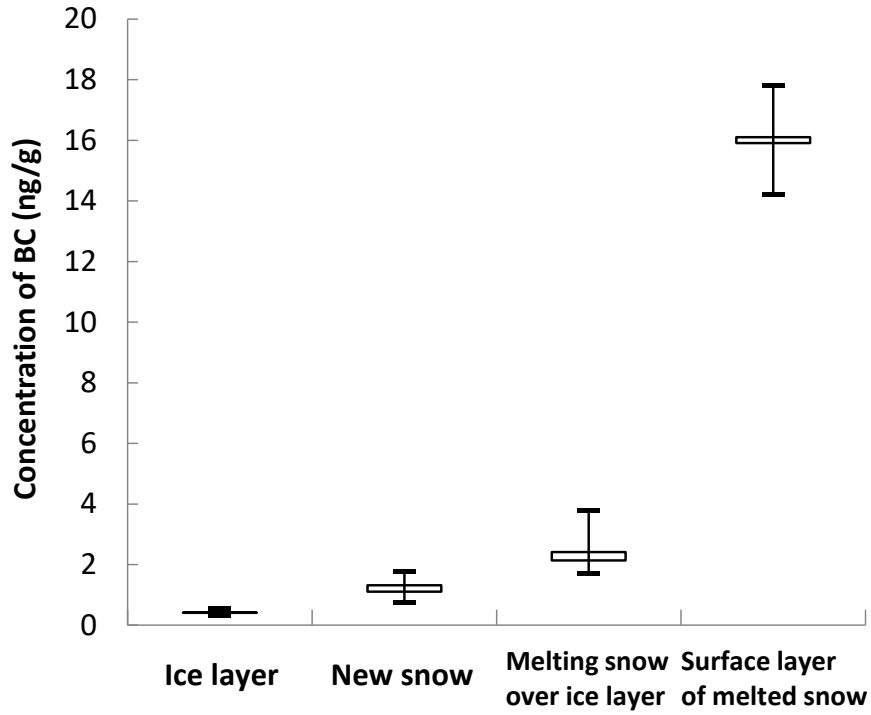

Figure S1. The BC concentrations in the ice layer and melting snow, and its concentrations in the new snow and in the surface layer of melting snow are also shown as a comparison.

New-snow samples were only collected in Elson Lagoon and Chukchi Sea during the measurement period. The box indicates the mean (upper) and median (bottom) values of the observations, and the whiskers constrain the full extent of the observations.

Figure S2. Conceptual sketch of snow overlying sea ice before and after the melt event.

Variables relating to the snow and ice layer mentioned in Eq. (1) and Eq. (2) are shown.
