

Interactive comment on “Imprint of Arctic sea ice cover in North-Greenland ice cores” by Damiano Della Lunga et al.

Anonymous Referee #1

Received and published: 4 December 2019

This is a promising undertaking but unfortunately in this case it has been ruined by a host of mistakes that should not have survived into the manuscript. It is impossible, given the number of erroneous calculations and assumptions, to assess whether the manuscript can be rescued. For that reason, the authors need to take it away and prepare a completely new and properly checked manuscript: this is not just a revision.

Please see attached pdf for a full review.
