

Wind-induced seismic noise at the Princess Elisabeth Antarctica Station

Point-by-point answer

Dear Referee,

Thank you again for your review, which helped us improve the manuscript.

Baptiste Frankinet,

For the authors.

Report #1

Thank you for your comments and suggestions.

Technical corrections :

In abstract, second last sentence: "model" is mentioned twice, remove the first one.

Yes, in fact it was repetitive so, we modified accordingly.

Table 1: The elevation of the AWS has a minus sign, which I believe should not be there.

There was no minus sign for the AWS elevation.

a and b parameter of the model: I think there are some formatting issues (e.g. "1" as subscript and after that also a "1" as normal character?!) which should be resolved (fine to do this during the typesetting process).

We modified the figure 3 accordingly to have only subscript as in the equation and the text.

I hope these modifications will have improved the quality of our manuscript.

Thank you again for your review.

Kind regards,

Baptiste Frankinet
