Submission tc-2021-152

Dear Dr. Brall thank you for your submission to be considered for publication in The Cryosphere. Your manuscript entitled '*Assessment of neutrons from secondary cosmic rays at mountain altitudes – Geant4 simulations of environmental parameters including soil moisture and snow cover*' I thought was very interesting. I am aware of the use of cosmic ray radiation work from a SWE perspective, therefore aware of the sensitivity to moisture etc. I thought quite innovative to use Monte Carlo simulations of neutrons for alpine regions.

From my own reading of the comments to the reviewers, I think the authors did a great job answering the questions and modify portions of the paper accordingly. Therefore, I accept the paper to be published following those comments.

Thank you for submitting your work to The Cryosphere.

Regards,  
Prof. Dr. Alexandre Langlois  
Associate editor, *The Cryosphere*
