

Dear Joel Savarino and type setting team

Please find enclosed the final version of our manuscript entitled “**A portable Lightweight In Situ Analysis (LISA) box for ice and snow analysis**” as accepted by the editor.

Only modification is to the data availability section. The data is uploaded to Pangea as one xls file only.

However Pangea warns “**Depending on the extent and complexity of your data submission the editorial process and minting of DOI names might therefore take up to several months. Due to the high volume of submissions, it is unfortunately not possible to answer questions about the current processing status.**”

Thus we wonder if an update to our publication can be made, once the data is finally published on Pangea.com and have received also a DOI and have for now stuck with the following data statement

“The following files will be available free of charge from www.Pangea.com upon publication. Reconstructed accumulation and density for the 2 meter snow profiles, as well as hydrogen peroxide and conductivity with depth and age (.xls).”

as the only modification to the accepted version.

Yours faithfully,

18. JUNI 2021
